

SAFETY, COMMUNICATIONS, AND EFFICIENCY FOR TODAY'S HEALTH CARE CHALLENGES

Simplify and Enhance Alarm Delivery

Maximize the Power of Mobile at the Bedside

With the growing integration of mobile devices into today's EMRs, hospitals are rapidly expanding their mobile strategies. The Alairo Mobile Platform (AMP) takes mobile utility to the next level by combining key clinical tools into a single, seamless platform—purpose-built to support nursing efficiency and responsiveness.

Priority One: Smarter Alarm Delivery

 Alarm fatigue is real, and AMP is designed to combat it. Each alert comes with a distinct tone and color coding, enabling nurses to instantly identify its urgency without even unlocking their phone.

Stay on Top of Every Alarm

 AMP keeps a simplified timeline of both pending and historical notifications, ensuring no critical event goes unnoticed—even when multiple requests overlap. This clarity helps nurses and managers alike maintain situational awareness across the shift.

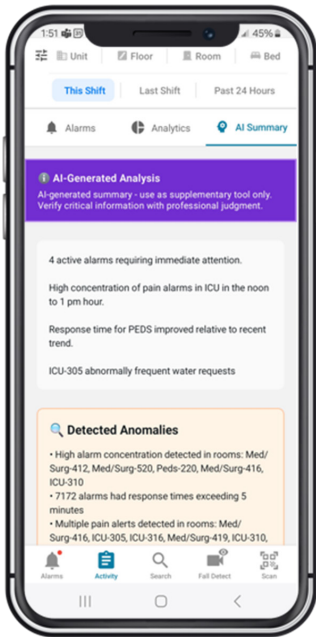

Connect with Patients Instantly

 With AMP, nurses can call back into the patient room the moment an alarm is received—acknowledging needs, calming their anxiety, or intervening before a bed exit occurs. It's a fast, practical way to deliver reassurance and reduce unnecessary room visits.

The Activities Tab: Insights that Guide Care

 Nurses don't just respond to alarms—they interpret patterns. AMP's real-time analytics track alarm behaviors by room, patient, or entire unit, making it easier to identify trends that might signal patient deterioration. View data from the current shift, previous shift, or a full 24-hour period to make informed decisions quickly.

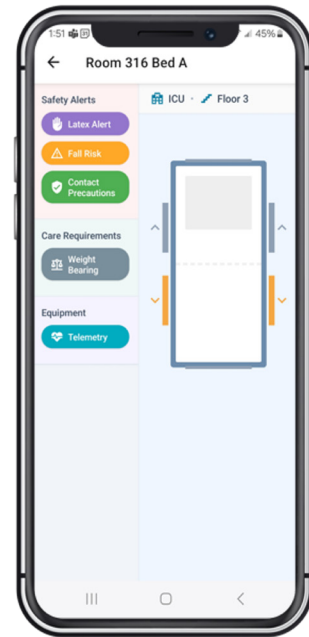

Shift Change Summary

 AMP supports nursing continuity with an AI-generated summary of unit activity, delivered in plain language to prepare the incoming team with clarity and confidence before the huddle begins.

Room Status Monitoring

 AMP's Room Status Monitoring gives nurses a real-time snapshot of every patient room. With just one tap, you can see key safety indicators like bed status, fall risk, infection alerts, or patient allergies so your team knows what to prioritize without delay.

Imminent Bed Exit Notifications (Optional, with AFP install)

 Hospitals using Alairo's Active Fall Prevention (AFP) benefit from real-time video sent to the nurse's phone the moment a patient shows signs of exiting the bed. This proactive alert enables early intervention and enhances fall prevention efforts. Nurses can also check in on a patient remotely through the AMP utility, without entering the room.

A Natural Extension of the Nurse Call System

 AMP goes beyond basic communication apps, offering essential features without the overhead of a full-blown Clinical Communication & Collaboration (CC&C) system. Built for flexibility and clinical relevance, AMP grows with your team's needs and integrates smoothly into existing workflows. As new applications are built-into the framework your team benefits from new capabilities, instantly.
